

Mini Assignment

Visual Breakdown – HCI vs. Computer Graphics

Human Computer Interaction and Computer Graphics

Student Name: Rameen Soomro(2k24/CSE/118)

Program: BS Computer Science

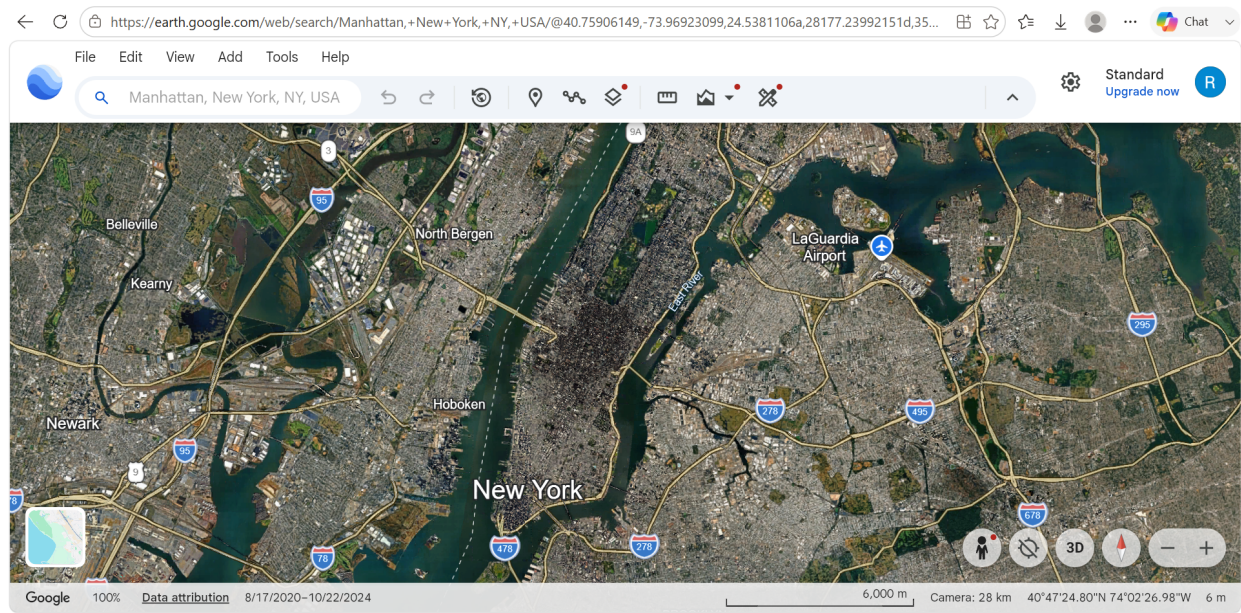

Submitted to: Sir Rajesh Kumar

Selected Application

Google Earth

Google Earth is an interactive application that allows users to explore geographical locations through maps, satellite imagery, 3D models, and interactive controls.

HCI – Human Computer Interaction

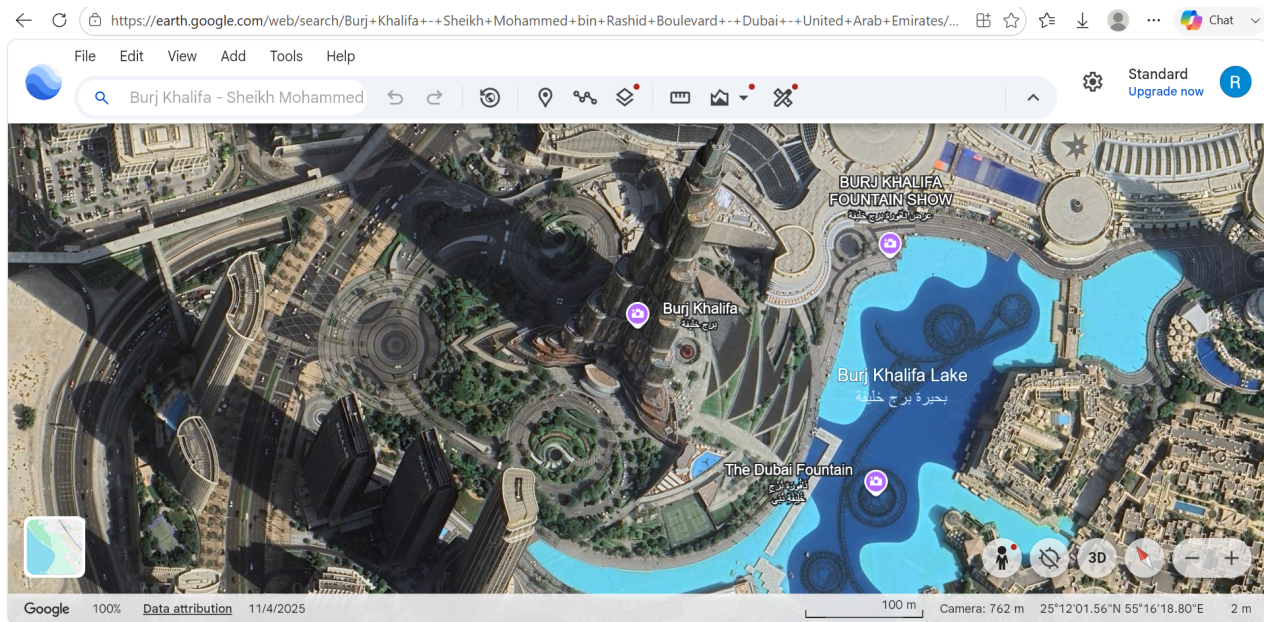

HCI Elements

- **Search Bar:** Allows users to search for specific locations.
- **Navigation:** Allows users to move around and explore the map.
- **Zoom Controls:** Allow users to zoom in and zoom out.
- **Buttons and Icons:** Provide controls for different functions.
- **User Interaction:** The application responds to mouse and keyboard actions.

Computer Graphics Analysis

Visual Elements in Google Earth

Computer Graphics Elements

- **Satellite Imagery:** Real-world satellite images are displayed on the map.
- **3D Models:** Buildings and structures can be represented in three dimensions.
- **Terrain:** Mountains, valleys, and geographical features are visually rendered.
- **Textures:** Images and textures are applied to geographical surfaces.
- **3D Rendering:** The environment can be viewed from different angles and perspectives.

HCI vs. Computer Graphics

HCI	Computer Graphics
Focuses on user interaction	Focuses on visual representation
Search, navigation, and controls	Images, textures, and 3D models
Improves usability	Improves visual presentation

Conclusion:

HCI makes the application easy to interact with, while Computer Graphics creates and displays the visual environment.
